THE POWER OF THE PROVISIONAL
The path to restoration success and longevity begins with a strong start. DENTSPLY’s provisional solution provides the right set of products and techniques to help ensure you achieve procedural efficiencies and optimal clinical success, while protecting office profitability.

Provisionals are an important element of crown and bridge restorations. Each successful execution supports your goals of final restoration longevity and patient satisfaction, while ensuring the full procedure remains one of the most profitable for the practice.

SUCCESS STARTS WITH
A BETTER PROVISIONAL SOLUTION

1. 2013 Levin Group Annual Practice Research Report, Dental Economics, November 2013
2. 2006 ADA Survey of Dental Services Rendered, 2011 ADA Survey of Dental Fees
ACHIEVING GREATER CLINICAL EFFECTIVENESS

From the preliminary impression to the provisional material and temporary cementation, visit one can lay the foundation for overall procedural success, resulting in:

- **Ideal conditions for healthy tissue in the definitive cementation visit**
- **Fewer patient interim visits due to repairs, adjustments, or remakes**
- **Less risk of patient posttreatment sensitivity**
- **More predictable outcomes**

Winning visit two. The provisional helps ensure patients return for their final crown and bridge seating appointment with optimal dental and tissue conditions for a surprise-free visit. Final fit, positioning, tissue contour, and tissue health are all directly impacted by visit one. Also, post-op sensitivity, patient comfort, masticatory function, and provisional esthetic qualities all play an important role in overall patient satisfaction and assessment of a clinician’s skill.

**BUILD FROM AN ACCURATE MATRIX**

- **75% of possible provisional pitfalls can derive from the preliminary impression.**
- **Repairs and remakes can cost an office as much as $900 or more in lost production.**

**CREATE A BETTER PROVISIONAL**

- **100% of definitive cementation visits are impacted by temporary cement use.**
- **High-quality alginate replacement VPS-based preliminary impression material.**
- **14-Day dimensional stability.**
- **Fast set material.**
- **High-quality alginate replacement VPS-based preliminary impression material.**
- **14-Day dimensional stability.**
- **Fast set material.**

**CEMENT WITH THE END IN MIND**

- **Set the tone for the rest of the procedure by choosing the right material.** Integrity™ TempGrip® Cement helps by:
  - Simplifying clean up with no residual cement left behind.
  - Establishing an ideal environment for resin-based definitive cementation.
  - Avoiding desiccating the prepared tooth.

**CONVENIENT MIXING & DISPENSING**

- **Protemp Plus (multiple lots) failed cure profile testing.**
- **Mixing of alginate provisional at 2 weeks.**
- **Mixing and dispensing of Algin•X Ultra material.**
- **Easy cleanup with Integrity TempGrip Cement.**

**BUILD FROM AN ACCURATE MATRIX**

- **Data on File; 2013 Levin Group Annual Practice Research Report. Dental Economics, November 2013.**
- **Provisionals breaking and needing repairs do not need to be a part of the cost of doing business.** Integrity® Multi•Cure Material helps remove the challenges of shrinkage and repairs:
  - Provides strength sooner via light cure to minimize risk of trimming and adjusting prematurely.
  - Bonds to tooth to easily add to or modify material.
  - Has minimal shrinkage for predictable restoration success.

**PROVISIONAL MATERIAL MODULUS DEVELOPMENT**

- **SIMPLIFIED CLEANUP**
- **CONVENIENT MIXING & DISPENSING**
- **PROVISIONAL MATERIAL MODULUS DEVELOPMENT**

**SUMMARY**

Winning visit one.

**Integrity Multi•Cure Material helps remove the challenges of shrinkage and repairs:**

- **High strength sooner via light cure option.**
- **Highly polishable to help ensure future tissue health.**
- **Easy to adjust and trim.**
- **MRT as early as 1’30”; trim & adjust 20” later via light cure option.**

**CONVENIENT MIXING & DISPENSING**

- **Easy cleanup with Integrity TempGrip Cement.**
- **Establishing an ideal environment for resin-based definitive cementation.**
- **Avoiding desiccating the prepared tooth.**

**SIMPLIFIED CLEANUP**

- **Protemp Plus (multiple lots) failed cure profile testing.**
- **Mixing of alginate material.**
- **Mixing and dispensing of Algin•X Ultra material.**
- **Easy cleanup with Integrity TempGrip Cement.**

**PROVISIONAL MATERIAL MODULUS DEVELOPMENT**

- **Storage Modulus (Pa) vs. Time (min)**
- **Protemp Plus (multiple lots) failed cure profile testing.**
- **Mixing of alginate provisional at 2 weeks.**
- **Mixing and dispensing of Algin•X Ultra material.**
- **Easy cleanup with Integrity TempGrip Cement.**
Education Also Helps Enhance Practice Efficiency. DENTSPLY can help you train and better utilize your staff for better procedural and practice efficiency.

Help Your Assistant Help Your Practice. Successfully executing the provisional procedure requires not only the skills of the dentist but also the skills of the assistant. In fact, many dentists wish they could use their assistant more. Underrated or underutilized auxiliary staff can lead to unnecessary office inefficiencies. Spending time and resources to bolster auxiliary staff knowledge and skills will go a long way in increasing total office production and patient satisfaction.

The Key to a Better Provisional? Start with a Better Lineup. DENTSPLY has designed a complete solution, including a suite of products that not only work well but also most importantly work well together. Providing opportunities for greater clinical effectiveness at every step.

52% OF CLINICIANS WANT TO USE THEIR STAFF MORE!
